

## Frequently Asked Questions Regarding Certification to CPSC Press Release and Federal Register Notice

1. With these changes, is there a need for composite certification (ANSI+ CPSC) after F16?  
For SGCC, we stay the course through F16 with no changes. See #5 for a tentative schedule.

2. Can we reduce sending an extra test sample to the Labs?  
SGCC has a Board meeting in May to discuss L16, until that time no changes should be made in the number of test samples sent to the Labs.

Following the Board meeting if the SGCC Board approves reducing the number of samples a memo will be provided to everyone.

3. Will there be a cost reduction as well?  
Same response as #2

4. As a result of these changes, will the labeling requirements change?  
At this time there are no changes to the labeling requirements. During the October 2016 **SGCC Certification Committee and Board of Directors** meeting, the committee will discuss the future labeling requirements. Following the meeting if changes are made SGCC will provide notice.

5. Tentative Schedule:

F16 = NO changes

L16 = Possible Reduced test samples and testing to ANSI only

F17 = Possible Label change
